

AMRIT

BLOCKCHAIN DEVELOPER

Kathmandu, Nepal | +977-98XXXXXXX | amrit.email@email.com
linkedin.com/in/amrit-profile | github.com/amrit-username

PROFESSIONAL SUMMARY

A dynamic and detail-oriented Blockchain Developer bridging the gap between technical innovation and strategic management. Transitioning from a solid Business Administration and Management background, I possess a unique blend of leadership, project coordination, and robust technical skills in Web3 ecosystems. Proficient in designing secure Smart Contracts (Solidity), building decentralized applications (dApps), and navigating blockchain architectures. Adept at agile problem-solving, team collaboration, and leveraging business acumen to deliver scalable, high-impact decentralized solutions.

TECHNICAL SKILLS

Blockchain Technologies: Ethereum, Hyperledger Fabric, Solana, Smart Contracts, Web3.js, Ethers.js

Programming Languages: Solidity, JavaScript, TypeScript, Python, Go, SQL

Frameworks & Tools: Hardhat, Truffle, Remix IDE, React.js, Node.js, Git, Docker

Core Concepts: DeFi, NFTs, Tokenomics, Consensus Algorithms (PoW, PoS), Distributed Ledgers

PROFESSIONAL EXPERIENCE

Junior Blockchain Developer – TechSolutions Ltd.

2024 – Present | Kathmandu, Nepal

- Designed, tested, and deployed secure and optimized Smart Contracts using Solidity for decentralized protocols.
- Collaborated with front-end engineers to seamlessly integrate Web3.js / Ethers.js libraries into client-facing dApps.
- Conducted unit testing, code debugging, and initial security audits to identify and fix smart contract vulnerabilities.
- Leveraged management background to manage project timelines, streamline agile sprints, and improve team coordination.

Blockchain Developer Intern – Web3 Innovations

2023 (6 Months) | Kathmandu, Nepal

- Assisted in building and deploying experimental ERC-20 and ERC-721 (NFT) token standards on Ethereum testnets.
- Wrote comprehensive technical documentation for internal smart contracts and deployment workflows.
- Researched emerging DeFi primitives and scalability solutions to present feasibility reports to senior developers.

EDUCATION

Bachelor of Business Studies (BBS)

Graduated: 2023 | Kathmandu, Nepal

Note: Successfully pivoted into Core Software Engineering and Blockchain through comprehensive self-directed studies, hands-on project engineering, and specialized technical bootcamps.

KEY PROJECTS

Decentralized Voting Platform (dApp)

- Developed a fully transparent, secure, and tamper-proof voting application utilizing Solidity smart contracts.
- Built an intuitive user dashboard using React.js, allowing verified users to cast votes smoothly with Metamask integration.

DeFi Crowdfunding Protocol

- Engineered a dynamic smart contract platform for transparent milestone-based fundraising with automatic refund clauses.
- Optimized gas consumption across functions, reducing execution fees by 15% during testing phases.

CERTIFICATIONS

- Certified Blockchain Developer – Blockchain Council / Coursera
- Ethereum and Solidity: The Complete Developer's Guide – Udemy
